Legend

Type: the data used in Expandable

Decimal means it is a numeric field.

NChar means it is an alphanumeric field of 10 or less characters.

NVarChar means it is alphanumeric field greater than 10 characters.

Datetime means it is a date/time field.

As of Version 9.0, Char and Varchar fields have been changed. The changes have been made to accommodate double-byte and Unicode support for multiple language symbol sets in the same database (Chinese, Korean, Japanese, etc.). Fields in the Expandable database that were Char or Varchar were converted to double-byte. The general rule for the conversion is if the field length is ten characters or less, the field was converted to Nchar. Those fields that were greater than ten characters were converted to Nvarchar.

The number in the maximum length column is the size of a field in Expandable. If the maximum length of a decimal field is 12 and the maximum number of decimals is 2, there can be twelve total characters in the number with ten numbers to the left of the decimal and two characters to the right of the decimal.

Max Length: the length in bytes of the field inside a SQL Database

The Data Elements Cross Reference starts on page 259. This is stored as a separate document on Expandable's web site.

Notes:

Table List

AL - Audit Log		Page Number
ALFTD	Audit Log Transactions Detail	13
 AP - Accounts Payable		
APFAB	AP Adjustment Batch	13
APFCB	Check Batch	14
